Note:

A1 No Nonsense Pest Control uses a combination of baits, dusts, liquids, traps, glue boards, repellants, etc. to properly treat your home. Some products (such as baits and other pesticide formulations) take longer to have full effect due to the nature of the control. Residents' cooperation is essential to eliminate or reduce insect population. Therefore, 100 percent control does not take place immediately in most situations. There is no guarantee that a one-time treatment will eliminate the infestation (except for wasps and hornets). We share any conducive conditions with customers and encourage customers to address. The use of any other pesticide products may interfere with the effectiveness of our treatment.

Pest control treatment involves the use of chemicals and in some cases treatment may result in property staining even when applied in accordance with manufacturers' guidelines. Property owner/resident understands this and not withstanding the risk of staining wants to proceed with treatment and waives the right to seek damages for staining and/or damages caused by moving of furniture/appliances that may arise from treatment.

Chemical Labels & SDS sheets for pesticides used: Transport Mikron, Exciter, Gentrol, Alpine WSG, and others are available for review at
